

Wireless Solutions for the Hospitality Industry

EION Solution Highlights

- Inexpensive, flexible installation
- Turn-key wireless solution
- Proven track record
- Rugged, reliable equipment

Introduction

With businesses becoming more and more global and international in scope, and individuals choosing exotic and diverse travel destinations, the hospitality industry is adapting to provide value-added services to its patrons.

In an effort to create a “home away from home” environment, hotels and resorts must be able to deliver services that are innovative and attractive to guests. Having the conveniences of home at your reach when on a business trip or vacation is a must-have for most travelers. Some of these services include Internet access, hot-spots and video on demand services.

In the hospitality industry, there is a strong business case for providing basic Internet access to patrons, and upgrades to business-oriented supplemental services such as printing print on demand and computer leasing.

Go wireless with EION and realize the full benefits of broadband wireless networks.

High-speed wireless building-to-building networks are perfect for hotel and resort owners of multi-unit campuses that need to extend broadband Internet access from a single location to one or more additional sites. Broadband wireless links are especially ideal for connecting older buildings that have not been pre-wired with fiber or don't have the physical space needed to accommodate wire line infrastructure.

INEXPENSIVE INSTALLATION, NO MORE LINE CHARGES

With broadband wireless connectivity, buildings can be linked quickly and inexpensively because there are no wires involved.

There are also no costly telephone company monthly line charges to pay or telephone company service delays to endure. As well, wireless links take up minimal physical space, because the equipment is located on the roof rather than that building's communication room.

TURN-KEY WIRELESS NETWORK SOLUTION

EION Wireless and its channel partners provide everything required to set up, use and manage a wireless building-to-building network. EION will assist in integrating broadband wireless access equipment with existing network gear, a process that takes only a matter of hours.

FAST, RELIABLE BANDWIDTH

EION's advanced wireless point-to-point and point-to-multipoint solutions are ideal for multiple building resort hotels because they are fast and reliable and provide the most bandwidth for your investment. Proprietary EION technology minimizes interference and ensures constant service over distance through increased data rates and enhanced reliability.

THE ONLY PRODUCT NEEDED

EION's advanced wireless equipment is only wireless solution needed for deploying building-to-building networks. EION products can be used to provide high-speed point-to-multipoint, point-to-point and backhaul connections. With only one wireless product required, building owners will save time on installation, save money on total network costs, and save the hassle of dealing with multiple wireless equipment vendors.

Sample Application

COMPANY:

A campground located just outside a major city with semi-permanent RV sites.

APPLICATION:

The majority of guests spend prolonged periods of time at the campground and require the same broadband Internet connection they are accustomed to having at home.

To do this, the company set up a point-to-multipoint broadband wireless network using EION wireless access points and antennas. The wireless network reaches all of the campground's RV sites and is scalable for future expansions.

BENEFITS OF GOING BROADBAND WIRELESS:

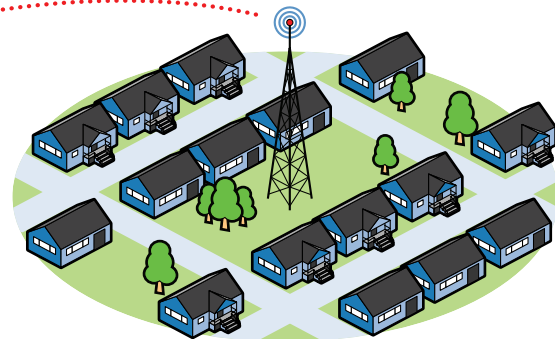

- Set up was accomplished in two hours because there was no need for time consuming and expensive wire line installations or telephone company service delays.
- The company saved enough in installation and monthly usage fees to promptly payback the entire network set-up costs.
- The campground is able to offer tenants service that supports bandwidth-intensive applications because the wireless link provides data throughput rates several times faster than those offered by wire line alternatives

EION'S SOLUTIONS FOR THE HOSPITALITY INDUSTRY SUPPORT MANY DIFFERENT APPLICATIONS, INCLUDING:

- Broadband Internet access
- Voice communication (VoIP)
- Custom links promoting the local facilities
- Video support for surveillance and communications
