

On-Demand Satellite Services

Solutions for Last Mile IP Connectivity

Today, advanced satellite services enable the distribution of multimedia-rich applications anywhere in the world. The global demand for cost effective IP over satellite services is growing because of the extended coverage that satellite technology is capable of providing with a low amount of infrastructure cost. Engineers at EION are developing intelligent systems for the satellite services sector that will increase availability and throughput; delivering on-demand multimedia content while reducing operating costs. The EION Satellite Services solution employs advanced QoS, developed and optimized specifically for satellite-network traffic.

Solution Benefits:

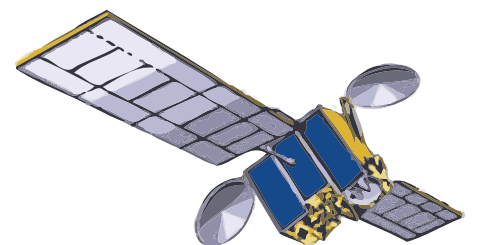

- Reduced Operating Costs
- Rugged – for operating in extreme environments
- Centralized Management
- QoS – guaranteed service delivery and performance
- Increased broadband coverage opportunities

Applications supported:

- VPN support for secure applications
- Internet Access
- Voice (VoIP)
- Video Surveillance

Markets:

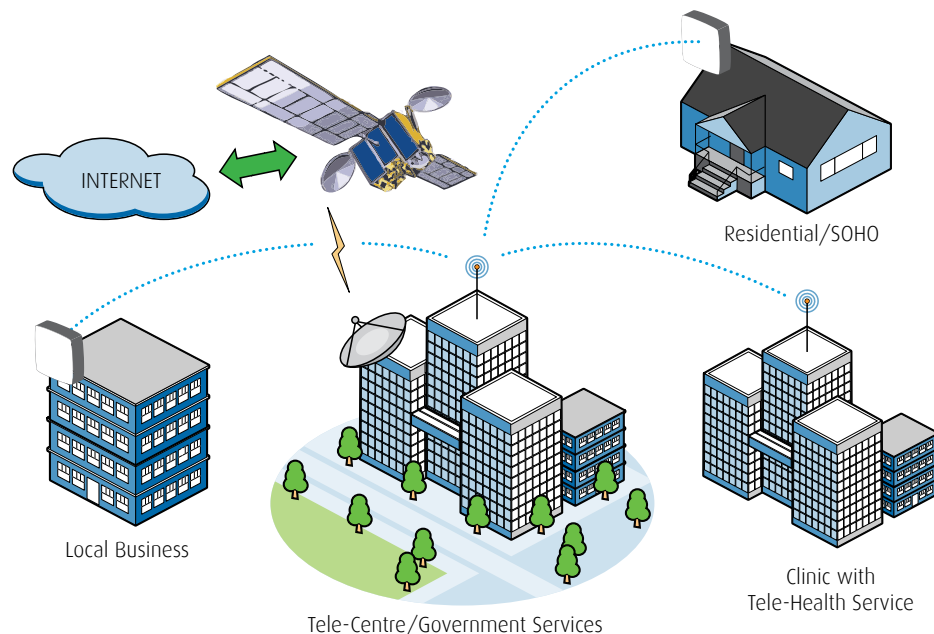

- Rural and Remote Communities
- Tele-Health
- Distance Learning
- Extended Enterprise Coverage
- Defense, Military and Intelligence Agencies or Departments
- Oil, Gas and Resource Exploration
- Internet Service Providers
- Temporary Emergency Relief Operations

The Solution

EION's On-Demand Satellite Solution offers customers:

- WiFi standard-based client access
- Repeater infrastructure for extended range and coverage
- RADIUS server authentication for secure client access
- Custom links promoting local facilities
- Fully Supported Solution

PRODUCTS

EION Wireless is a global provider of broadband wireless communications products and technologies, offering businesses including telecom service providers, governments and enterprises effective, economic and secure high-speed wireless communications solutions. EION specializes in high-speed Internet access, VoIP, data network extension, and wireless data and telephony backhaul, utilizing its high quality products and industry-leading technologies.

The EION Wireless product family consists of Point-to-Point and Point-to-Multipoint wireless access systems from 2.4 GHz to 5.8 GHz in the unlicensed spectrum. EION products are a set of ultra-ruggedized, reliable and flexible radio systems composed of subscriber units, base station units, wireless bridges and antennas.

The EION Tidal product family is a set of robust, intelligent and highly scalable broadband gateways that provide an effective and flexible platform for interconnecting networking applications, network management services, as well as client/server systems.
